

DOCKET NO.: CP380H
Application No.: 10/789,628
Office Action Dated: March 29, 2006

PATENT

REMARKS

Restriction has been required under 35 U.S.C. § 121 to one of three groups of inventions, characterized as Groups I to III. The claims of each group, and the subject matter associated with each group, are set forth below.

Group	Claims	Subject Matter
I	14 to 17	Methods of treating cancer in a human, wherein the cancer is leukemia
II	18	Methods of treating cancer in a human, wherein the cancer is lymphoma
III	19	Methods of treating cancer in a human, wherein the cancer is a solid tumor not in the central nervous system

Applicants respectfully traverse the restriction requirement because a search and examination of the subject matter encompassed by the entirety of the pending claims can be conducted without a serious burden.

The purpose of § 121 is to avoid the necessity of conducting separate and diverse searches of claims directed to independent (unrelated) subject matter. Separate and diverse searches would not be required for the present application, however, because the relationship among the claimed subject matter is such that a generalized search of the subject matter encompassed by the claims of any one of Groups 1 to III would necessarily lead to disclosures, to the extent that any exist, of the subject matter encompassed by the claims of the remaining groups. For example, a search of methods for treating cancer in humans that utilize a combination of one or more arsenic compounds and all-trans retinoic acid would necessarily lead to specific disclosures, to the extent that any exist, of methods for treating the particular types of cancers delineated in groups I to III. In this regard, the subject matter of each of groups I to III

PATENT

has been classified by the Patent Office in the same class and subclass. Accordingly, a search and examination of the entirety of the subject matter encompassed by groups I to III would not impose a serious burden on the Examiner, and Applicants respectfully request withdrawal of the restriction requirement. M.P.E.P. § 803 ("If the search and examination of an entire application can be made without serious burden, the examiner *must* examine it on the merits, even though it includes claims to independent or distinct inventions.")(emphasis added).

Nevertheless, in accordance with 37 CFR § 1.143, applicants hereby provisionally elect the subject matter of Group II for prosecution on the merits, encompassing claim 18 and drawn to methods of treating lymphoma in a human. Based upon the comments made in the Office Action with respect to the Examiner's intention to withdraw the restriction requirement if the claims that link the subject matter of Groups I to III are found allowable, it is Applicants' understanding that this election is being made solely to aid the Examiner in conducting an initial search and examination of the claimed subject matter. Applicants accordingly ask the Examiner to treat this election as an election of species, and expand the search and examination beyond the elected subject matter if such subject matter is found to be allowable over the prior art, until the examination includes the full scope of the claimed subject matter.
